Dear members,

Welcome to the new year, and thank you for all your support in 2023.

Last year was a difficult one — some industries in Minnesota thrived, while others ran into more roadblocks. I wish we had a crystal ball for this coming year but we don't. Most analysts are still very optimistic that we will avoid a hard landing.

On the positive side, it looks like inflation is starting to be more manageable, which will in turn lower material costs, one factor that has a great impact on business in our industry. The labor market will also start to soften, which should help us retain and hire new employees. Hopefully this will allow businesses to start investing in new projects and free up the capital to launch them.

I would like to thank Steve Kalina, our MPMA president, for all the leadership, vision and passion he continues to give to our association. Without his help, a lot of initiatives would not have happened. Steve has been planting seeds within several agencies and we hope to receive more funding in 2024 to speed up several key initiatives.

As we look toward 2024, it's a very promising year. We have more training programs starting — keep an eye on the MPMA communications to sign up. We are also planning more ways to do outreach in K-12 schools to bring awareness to our trade, via trapshooting, youth sports and job fairs.

If you're interested in learning how you can help, or in participating in these events, please feel free to reach out. As always, thank you for your continued support of our association.

And lastly, I want to remind everyone that MPMA cannot exist without so many great partnerships. As we wrapped up 2023, I want to personally thank all of our annual partnerships. These are companies that support our industry and our causes. I hope that when business needs arise, that you connect with them!

Best Regards,

Laurent Deconinck PM

THANK YOU 2023 SPONSORS

The power of connection

MPMA fosters peer relationships through new initiatives

by Steve Kalina

STEVE KALINA
President / CEO
Minnesota Precision
Manufacturing Association
steve@mpma.com

Dear members,

I often tell the story of how I came into this role. Being around MPMA my entire life, I benefited from countless mentors and leaders in the industry that I've looked up to. And now I have the privilege to work with those fine people.

All of us benefit from those relationships over the course of our careers, and that is truly the benefit and the strength of the Association. Recently, the Goerges family of Pequot Tool and Precision Tool Technologies had to say goodbye to their mom, Agnes, at the age of 92. Agnes and her late husband Joe lived full lives and created an amazing family and manufacturing organization. They would often reminisce about their love for the industry, and their time spent with MPMA over those years. That level of industry engagement has carried to the next generation that many of us know today.

MPMA has helped facilitate these industry peer connections for over 68 years and consequently, each week I get calls or emails from members asking if we know other members with a certain ERP system, a referral for a general contractor, a member that has dealt with cyber-security challenges, or someone with a specific machining capability. These are just examples of things members look to others in the industry for advice on. I love being a liaison for those conversations, but it's difficult to connect in every circumstance.

So one new offering we're launching in 2024 is The MPMA Machine Shop. This will be a LinkedIn, member-only space where members can share insights, ask for help, and connect on matters that only manufacturers can understand. If you are connected with me on LinkedIn, expect an invite soon. If you are not, or are not signed up for LinkedIn, I encourage you to do so. This will be a great way for all of us to connect with our peers, when we are unable to do so in person. We can learn from each other, support each other and continue to build the strong community of Minnesota manufacturers.

We're also in the process of applying for three different grant funds to expand and greatly amplify our workforce development efforts. The areas we've focused on for the past 2-3 years have prepared us for taking them to a new level in 2024. Get ready!

Steve Kalina

A necessary – and good – shift for the MPMA’s magazine

In 2024, we’re moving to quarterly magazines

by Maddie Lemay, Publication manager

MADDIE LEMAY
OWNER
Publication Manager.
Minnesota Precision
Manufacturing
Association
maddie@lemaystudio.com

Dear members,

In 2020, I received a call from MPMA President Steve Kalina asking if I’d want to take on the role of communications manager for the association. At the time, I was a freelance journalist and writer hoping to scale my “gig” jobs into an editorial content business. So I flipped the question back at him. “Would you want to work with me as my first client?”

MPMA was my first official “contract.” Since 2020, we’ve managed their magazine, attended events, gotten to know members, and shared in the necessary growing pains that come along with a new website, CRM, and more digital transformations. Looking forward to 2024, I’ve never been more excited about the direction MPMA is headed from a communications and marketing perspective. Armed with a fresh website, new email platform, and updated branding, it feels like the sky’s the limit. But with growth always comes changes, and the next shift we’re making is to the magazine.

Moving forward, we’ll be printing magazines on a quarterly basis instead of bi-monthly. I’m excited about this shift, because it will allow us to post our more timely content to the website, allowing you – our readers – to share our articles on social media (something our old website did not allow us to easily accomplish.) It will also free us up to focus on providing even more high-quality content for each print edition.

As someone who comes from the world of print journalism, there’s something so special and grounding about holding a hard copy of a magazine or newspaper. It feels more focused; less full of distractions and notifications. That’s why we felt very strongly that we should continue printing magazines on a quarterly basis. Our goal is that each magazine we do print will be meatier; filled with valuable content and focused topics. (Which is why we need you, our readers, to send us your ideas!) However, as we also work to shift our focus towards today’s digital world, I do have a few favors to ask of you:

- 1. Would you subscribe to our emails and follow us on social media? This allows us to ensure the articles we post are being distributed to you – our most loyal readers. You can head to mpma.com to subscribe to our emails, and you can find us on LinkedIn at Minnesota Precision Manufacturing Association.
- 2. Would you email us at communications@mpma.com for content ideas? The best ideas come from people who are living in the world we’re writing about!

Thank you for your readership and loyalty. Many of you, we know, have been getting this magazine in your mailboxes for several decades. We don’t take that lightly.

Maddie Lemay

MADE IN THE USA

Two MN-Based Manufacturing Companies Attract Buyers From Across the U.S.

By Melissa DeBilzan

TS Products was acquired by Singer Industrial in September, 2023.

Minnesota-based manufacturing companies have become focal points for mergers and acquisitions in recent years, attracting interest from buyers across the country.

Two of the most recent sales in the state involve TS Products in Dundas and BP Metals in Isanti. Both were facilitated by Jon Tichich, who is a manufacturing mergers and acquisitions expert with Calhoun Companies.

"I've noticed that buyers are particularly interested in Minnesota manufacturers due to the state's location, workforce, and diverse ecosystem of manufacturers compared to other states," Tichich said. "Nearly half of the buyers in my network are out of state. Buyers see a lot of opportunity here."

In the past, many shop owners simply transitioned the business to the next generation. Today they are negotiating

with private equity firms, high-net-worth individuals, family offices and other strategic buyers. The sales have become more complex.

SINGER INDUSTRIAL ACQUIRES TS PRODUCTS - SEPTEMBER 29TH, 2023

In 2023 Steve and Tammy Schultz decided to sell TS Products after 22 years. Although Steve Schultz had compiled a short list of potential buyers, he had never sold anything worth as much as his business and didn't want to try navigating the transaction himself. He knew he would need help from an experienced advisor to ensure a successful outcome.

Over the years Schultz grew TS Products from a one-man shop to a multi-million dollar operation – all without a website, social media or marketing budget. In the last decade alone, the shop was growing by 20 to 30 percent each year.

As word of mouth spread, the company earned a reputation as a high-quality designer and producer of hydraulic power units. Some of those units are used to lift 2,000-pound manhole covers in the middle of the street. Others are used to trigger safety valves in dump body trailers carrying tons of material. Both AC and DC units can be customized for a variety of needs requiring 1 to 50 horsepower. They are sold to OEMs around the world.

However, Schultz wasn't interested in continuing to "feed the monster." He knew the only way to keep up with rising demand was to hire additional people, add more warehouse space, implement a costly ERP system and continue working a grueling schedule.

The only alternative was to sell the company and allow someone else to take it to the next level.

Schultz chose the latter.

"I interviewed four business brokers and wasn't impressed with any of them except for Tichich at Calhoun Companies," he said. "After one meeting, it was obvious Jon was the best option and I knew his expertise would pay off."

Within three weeks, Tichich was able to secure a letter of interest from a company that had expressed possible interest in the past: Singer Industrial, based in Dallas, Texas, is America's largest industrial rubber, fluid power and automation value-added distributor with over 1,300 employees and 90 locations nationwide.

"Finding a buyer was the easy part in my case," Schultz said. "What surprised me about the rest of the process was the level of complexity, due diligence and legalities involved. Jon helped me analyze every decision and coached me through the entire process. Without him, the end result could have looked much different."

Three months after receiving the letter of intent, Schultz signed the closing paperwork to sell the company and handed over the keys. He chose to remain involved as a sales engineer. That way he can continue to help grow the company, but not necessarily be responsible for it.

"My passion is engineering, not management," he said. "Selling the company has freed up my time for the things I enjoy most, like working directly with customers to help solve problems. I would highly recommend Jon to any manufacturing owner considering an exit."

GENERATION GROWTH CAPITAL ACQUIRES BP METALS - OCTOBER 25TH, 2023

In 2008, Blake Pendzimas purchased a struggling sheet metal fabricator for less than the price of a used car. The business came with no employees, one piece of equipment and generated \$160,000 in sales in the first year. By 2023, however, it had grown to 35 employees and eight figures in revenue.

Based in Isanti, BP Metals fabricates custom parts for store displays, agriculture products, restaurant equipment and other applications for OEMs. Over the years, it gained an edge over competitors by focusing on price and turnaround time.

BP Metals was acquired by Generation Growth Capital in October, 2023.

Like many business owners, Pendzimas was so wrapped up in day-to-day operations that he hadn't thought much about selling until he realized what the business might be worth. Then he started dreaming. He wanted to spend more time with his partner, Cara Knapp, who helped manage the company. He also wanted the flexibility to take more vacations and work on his own terms.

"I realized I had taken the company as far as I could," Pendzimas said. "It was time for us to do something different with our lives and the future of the business. We just had no idea how to make that transition happen, so we leaned on Jon to guide us through the entire process."

Tichich's process and robust network of highly motivated and qualified buyers generated substantial interest, resulting in nearly a dozen formal bids within a matter of weeks. Most were from established private equity groups and family offices.

"Jon's connections in this industry gave us more options than we thought possible," Pendzimas said. "We received a great bid within the first few days of interviewing buyers and wanted to accept it, but he told us to wait and trust the process. I'm glad we did."

Ultimately, Pendzimas and his partner didn't select the highest bidder.

Instead, they chose to sell to Generation Growth Capital, a private equity group based in Milwaukee that is

building a portfolio of complementary metal fabricators. They also negotiated part ownership in the private equity fund, which was a win-win for both parties.

"Whatever decision we made, we wanted it to be in the best interest of our employees and customers," Knapp said. "Generation Growth Capital is fully equipped to lead BP Metals toward the next stage of growth and we're excited to continue to play a role in that."

Many shop owners are in similar positions – they've spent years building their business and know they need to transition out some day, but aren't sure where to start. Tichich's advice is to talk with an expert who is familiar with the company's industry instead of a generalist that serves a variety of industries.

As a member of the Minnesota Precisions Manufacturing Association (MPMA), Tichich is recognized as one of the most trusted, experienced and knowledgeable advisors in the industry.

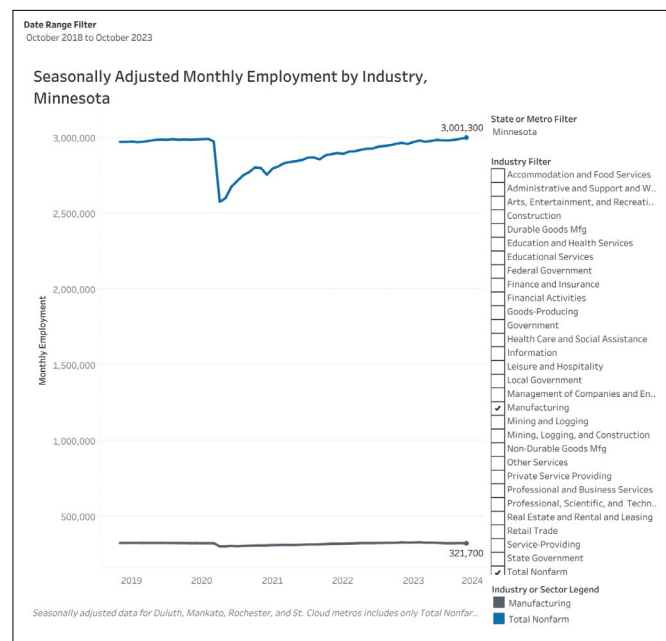

Since July 2023, Tichich has sold six MN based manufacturing companies.

"Even if you don't plan to sell for five or more years, it's best to be proactive and to have a conversation about what you can do now to begin preparing," Tichich said. "My expertise is educating owners in the manufacturing community on how to best position their companies for the right buyer at the right time. In more cases than not, the sooner we start planning, the better the results." PM

A STORY OF SLOW GROWTH

Experts weigh in on what happened in 2023 and weathering what's to come in 2024

By Jaimee Barnhart

Data from the Minnesota Department of Employment and Economic Development (DEED) shows trends in overall employment throughout the state vs. in the manufacturing industry alone over the past few years. (Source: DEED 2023)

“Industries [like manufacturing] that are more exposed to national and global markets, that are more sensitive to rising interest rates, they’ve been feeling those impacts more recently.”

-Sean O’Neil, Director of Economic Development and Research with the Minnesota Chamber of Commerce.

At both the local and national level, the economy saw rain and shine in 2023, and Minnesota manufacturers have felt it all.

Last year around this time, rumors of an impending recession had many Americans feeling nervous about what was to come. But while a large group of economists predicted a possible downturn in 2023, months of strong data led some experts to push back their predictions further into 2024 or even cancel them altogether.

Though it came as a surprise to some, the economy did continue growing in 2023, said Joe Mahon, Regional Outreach Director at the Federal Reserve Bank of Minneapolis. There are a few key factors that this growth can be attributed to.

“Month after month, we’ve seen the economy continue to add jobs,” Mahon said. “The data that we have on GDP (Gross Domestic Product, or the value of goods and services that the economy is producing), has continued to grow.”

While the overall economy has seen some trends toward slow growth, the manufacturing sector has started to take turns cautiously. Continuing labor shortages and concerns about recent state legislation have left many uncertain of what lies ahead in 2024.

AN IMPROVING LABOR MARKET

Unemployment remains one of the main indicators of economic health, and for the past few years, unemployment in Minnesota has been relatively low, especially as compared to the nation as a whole, said Sean O’Neil, Director of Economic Development and Research with the Minnesota Chamber of Commerce.

The largest dip in recent history was during the pandemic, which has had a lasting effect on employment. In April 2020, the Minnesota economy lost over 360,000 jobs in a single month, according to data from the Minnesota Department of Employment and Economic Development (DEED). This marked the single-worst over-the-year (OTY) job loss since DEED started collecting monthly data on employment.

By the third quarter of 2023, O’Neil said, Minnesota had finally recovered all of the jobs that were lost in the 2020 pandemic. In addition, there’s been an increase in labor force participation rate and continued wage gains in the workforce.

“When you look at overall growth in our economy, it has been expanding at a slower rate throughout this recovery and growth period we’ve been in since the 2020 downturn,” said O’Neil. “We’ve been in this holding place where our economy remains stable, but is growing slowly, both compared to previous years and for the state, but also slower than other states around the U.S.”

For instance, Minnesota’s GDP growth rate has consistently ranked around 35th out of the 50 states, said O’Neil, and post-pandemic job recovery has been lagging behind other states.

“Then you add on top of that some of the macroeconomic factors that are impacting Minnesota related to rising interest rates and inflation, there are a lot of cost drivers that are impacting businesses,” said O’Neil. “I think many [business owners] are feeling the weight of the cost increases that have piled up over the past couple of years.”

THE STATE OF MANUFACTURING

While jobs have been added across the board, not every industry has seen equal benefits. Economic sectors including service and hospitality, entertainment and even healthcare (many of which were disproportionately affected during the pandemic) and even construction have contributed to the majority of new jobs in Minnesota. Meanwhile, the ongoing labor shortage problem manufacturers face tells a different story.

For a while, O’Neil said, manufacturing was one of the quickest-growing industries in Minnesota. In early 2023, though, the manufacturing sector started shedding jobs.

“Industries [like manufacturing] that are more exposed to national and global markets, that are more sensitive to rising interest rates, they’ve been feeling those impacts more recently,” O’Neil said.

Mahon, who meets regularly with Minnesota manufacturers, said the sentiment he’s picking up from those he’s spoken with is a bit more negative.

“Over the last few months, the manufacturers that we survey have been telling me that they’ve seen average demand come down, they’re spending less, and they’re less likely to be considering big capital investments right now, because things have slowed a bit,” Mahon said.

While Mahon said some manufacturers report that business is good right now, the overall trend appears to be moving toward a slow-down.

THE DATA

Industry data points to an impending downturn in 2024.

Creighton University in Omaha, Nebraska publishes a monthly survey, the Mid-America Manufacturing Index, which has become a trusted indicator of the current health of the manufacturing industry.

As of November 2023 (the most recent data at the time this article was written), Minnesota had an overall index of 43.9, as compared to 52.2 at the beginning of the year. The overall index had dropped to its lowest since June 2020, putting it in a range that indicates recessionary conditions, according to Creighton.

The Bureau of Labor Statistics also found that between April and November 2023, the industry lost 12,000 jobs overall.

MOVING FORWARD

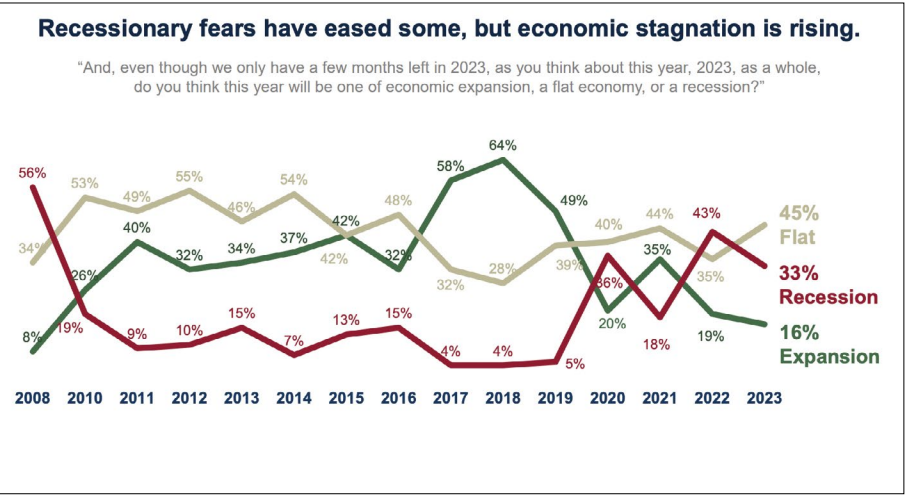

“Looking at the impact of what was passed in the 2022 legislative session remains a focus of ours,” O’Neil said. “[The Chamber] will continue to advocate for businesses at the State Capitol, but also try to find some private sector solutions to help them lower costs.”

It’s impossible to predict what will happen in 2024.

“2023 was a year of continued growth,” Mahon said. “I think that we’re seeing some signs and that things are slowing down for manufacturers. But it’s anybody’s guess whether that’s going to be a longer lasting phenomenon, or whether that’s a temporary blip.” PM

Business executives are very concerned about the recent state legislative session, especially the paid leave requirements.		
"Thinking about some of these issues, I will read you a few short descriptions of recent developments coming out of the legislative session, and I want to know how concerned you are about this legislation and its effect on your business."		
The lack of small business exemption for paid leave, meaning small businesses will be forced to provide the same benefits as larger corporations	56% Very	77%
The costs associated with funding the new paid family and medical leave program through a new payroll tax, split between employer and employee	47%	72%
The new requirements on an employer for paid sick and safe time	38%	68%
Cannabis in the workplace and limits on being able to regulate it	38%	60%
The new wage theft law that makes property owners and developers responsible for any wage theft by construction subcontractors	20%	44%
The ban on non-competes	15%	35%

Each year Enterprise Minnesota conducts a survey of leaders in the manufacturing industry. This year, focus group participants were asked about their concerns relating to the most recent state legislative session. (Source: State of Manufacturing 2023)

The State of Manufacturing survey also asked participants how they felt about the current state of the economy. (Source: State of Manufacturing 2023)

3 Pitfalls to Avoid with AI Content in Marketing

by Dave Meyer, BizzyWeb

Tools like ChatGPT allow you to create content in mere seconds. And with these tools comes the question: how do I use this to make my life easier?

Using generative AI tools can buff up your content output, but as with any new technology, there are a few problem areas to avoid.

1. “REPLACING” WRITERS

One of the most common pitfalls with AI content is assuming you can use it 100% instead of having a human writer create content.

While AI content has dramatically improved, it’s still not a replacement for a human writer. Your audience can detect fakeness pretty quickly (think “uncanny valley,” or those weird early-days animated videos - it just feels “off”). When you rely too much on AI for all your content needs, you’ll end up with circular logic, overly repetitive content, and sometimes plain-old errors.

Not to mention: you’ll sound like everyone else out there who’s using AI to write content. Why should someone engage with your business when you sound fake, and like everyone else?

Do this instead: Use AI content as a starting point.

AI content shines in ideation, research and combating writer’s block. Use it to

kickstart your writing process and as a first draft, but not as a final, polished product. I’ve used AI to help brainstorm topics, outlines and even first drafts for introductions and conclusions.

2. CHOOSING QUANTITY > QUALITY

Another common trap to avoid with AI-generated content is immediately ramping up your production schedule without considering quality.

Generating long-form content and then trying to have a writer “clean it up” later is typically not very effective. They often have to spend nearly as much time rewriting as they would have writing it from scratch.

Google is also aware that people may try to artificially boost their rankings by pumping out higher volumes of content at a lower quality - and its algorithm is trained to reward quality over quantity.

Do this instead: Use AI content to save time on repetitive writing tasks. Where you can use AI to shave time off the writing process isn’t in writing the piece itself - but in the building blocks that get you there. Things like generating outlines and creating subheadings are a great use of AI.

AI can also work to save you time on distributing pieces of content - for example, using AI to convert a video

script into other formats like blogs, emails or social media posts.

3. NOT FACT-CHECKING

The goal of generative AI is to produce conversational content in real-time. It’s not to provide the most accurate information. You may find - especially the more niche or technical your prompt - that answers produced by AI are not 100% accurate or factual.

That isn’t to say that information by default from AI is nonfactual, but it is to say that producing facts isn’t its primary goal, so you can’t assume that whatever it tells you is correct.

Do this instead: Verify anything that comes from AI.

Trust, but verify. Double-check anything created by AI for accuracy. Not just in terms of numbers or data, but if it passes the sniff test. Any content you use from AI will have your brand behind it, so treat it like you would content produced by a human writer.

Generative AI content is exciting, and it can save you time - if used correctly. Don’t use it to replace a human, but assist the humans that work to make your brand yours.

PRECISION MANUFACTURING

2024

BUYER'S GUIDE

WELCOME!

Welcome to the 2024 edition of MPMA's Buyer's Guide, a trusted resource for MPMA members.

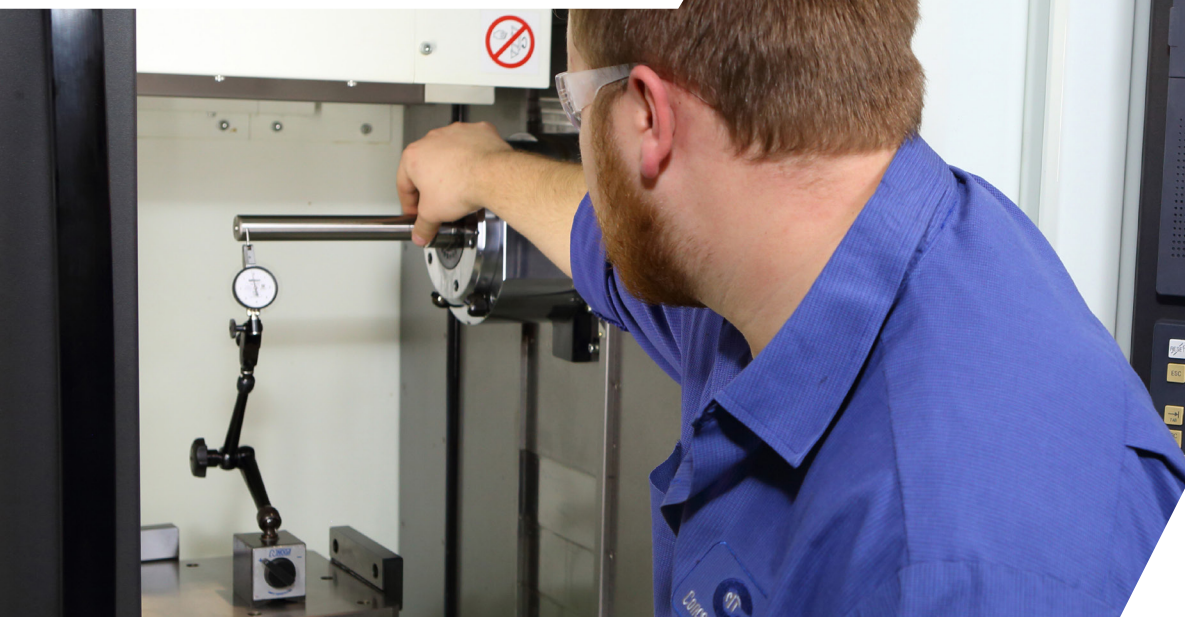

The index is split into three sections:

- Need fabricating services? Look in the Manufacturer section.
- Need metrology assistance? Look in the Distributor section.
- Need legal representation? Look in the Professional Services section.

KEEP THE GUIDE! USE IT OFTEN!

- It's the "Yellow Pages" of precision manufacturing, where you can reach your fellow MPMA members when you need specific services. There's also an index on the next page for easy reference.
- Don't forget to cross reference the Guide with the extended Member Directory that starts on page 18 of the magazine. It gives individualized information about all MPMA members.
- The information printed in the Guide is available online at mpma.com. Go to "Members" in the top menu bar, and select "Member Search." You can search by a company name, location, services, or industries served to find a fellow MPMA member to meet your needs.
- Members can update their profile at any time of the year by logging into their company account on mpma.com to change their information – from the company address, phone number, services provided, and many more. So, the most up-to-date information can be found on mpma.com.

THANK YOU for being a member of the MPMA, your trusted resource for precision manufacturing in the state of Minnesota.

SERVICE

It's the most important concept of all.

Supporting you every step of the way.

We're committed to supporting you with the service your production and quality teams expect — so you can minimize downtime and maximize productivity on your equipment. Concept has been servicing all makes and models of equipment for 50 years.

- High-priority responsiveness to unplanned repairs
- Preventive maintenance programs
- ISO 17025 calibration services for tools and equipment
- Inspection and measurement services
- Measurement and turnkey programming services
- Industry leading response times from large and experienced service team

Service includes helping you automate to gain extra production hours and allow your team to focus on the highest value activities. Concept is a FANUC Authorized System Integrator, capable of facilitating your automation journey, wherever you are on the path.

MAINTENANCE 360®

We focus on three core areas:

Preventive Maintenance
CNC machine cleaning and coolant management services to maximize tool life.

Fluid Reconditioning
Filtration services to recover degraded or contaminated fluids versus disposal.

Industrial Cleaning
Turnkey services to perform efficient, labor intensive maintenance on critical equipment.

HIGHLIGHTS AND HAPPENINGS

- MPMA Education Foundation scholarships are now open for application through April 15th. MPMA member employees receive preference, so please encourage employees to apply!
- C-Axis Medical Manufacturing recently completed a building renovation giving them a new world-class look. They partnered with Larson Building on the project.
- MPMA welcomes our newest team member, Meaghan Ziemba, as our Sales Associate. She will be helping companies find ways to engage with MPMA, as well as facilitating all advertising.

APPLY HERE

UPCOMING EVENTS

Toolbox Talks:

Wednesday, January 31, 2024
Join us at AdvancedTek to visit their additive manufacturing TekCenter in St. Paul. We will have a guided tour of their 2,700 sq. ft. 3D Printing TekCenter, home to five cutting-edge additive manufacturing technologies. Experience 3D printing in action, engage hands-on with real world printed parts, and gain insights into the newest printers and materials providing manufacturers with tool-free production capabilities. A light lunch is provided. Registration is appreciated.

SAVE the DATE:

47th Annual Golden Gloves Banquet & Boxing Exhibition
Tuesday March 26, 2024
Medina Entertainment Center
Registration opening mid-January

40th Annual MPMA Golf Open Presented by Lube-Tech
Tuesday July 23, 2024
Bunker Hills Golf Club

13th Annual Shoot For Scholarships
Wednesday October 2, 2024
Minnesota Horse & Hunt Club

MPMA Celebration of Manufacturing!
September or October 2024

UPPER MIDWEST

MARCH 26, 2024

BANQUET & BOXING EXHIBITION

LOCATION:

Medina Entertainment Center
500 Highway 55
Medina, MN 55340

SCHEDULE:

6:00pm Social Hour
7:00pm Prime Rib Dinner
8:00pm Boxing

Register Today

This is MPMA's largest networking event of the year!

Join us for a time-honored tradition at MPMA. Registration includes a prime rib dinner and a variety of boxing bouts. Proceeds benefit the Upper Midwest Chapter of Golden Gloves and MPMA initiatives. Table reservations are on a first-come first-serve basis. *Reservations are not guaranteed until payment is received.* Raffle prize donations are needed.
